

GUI mock tool

A GUI mock is a sketch of a graphical user interface intended to align the views of developer and customer. A GUI mock should only display what interaction is possible through the GUI and not imply anything about the style.

With a special GUI mock tool it is possible to create GUI mock's. There are many different tools, however most of them have only a free trial period or are very limited in some other way with the free version.

Four of the most promising GUI tools have been selected to be compared.

- [Conclusion](#)

Comparison

Pencil project: <http://pencil.evolus.vn/>

- no signup
- free to download windows application
- save as PNG

Lumzy: <http://lumzy.com/app/>

- no signup
- web application
- simulation mode
- signup popups

Cacoo: <https://cacoo.com/signup>

- Signup required
- web application

Mockflow: <http://www.mockflow.com/signup/>

- Signup required
- windows application

Conclusion

From these the Cacoo program seems to be the best choice because it has an easy to use web application without popups.

Cacoo also allows for easy sharing of GUI Mocks.
